# INTRODUCTION TO CHANCE® HELICAL PILES

A helical pile is a segmented deep foundation system with helical bearing plates welded to a central steel shaft. The load is transferred from the shaft to the soil through bearing plates. Central steel shafts are available in either type SS (Square Shaft) series or type RS (Round Shaft) series. The type SS series are available in 1-1/4" to 2-1/4" square sizes. The type RS series are available in 2-7/8" to 8-5/8" diameter sizes. The type SS/RS combinations are also available for compression applications in soil conditions where dense/hard soils must be penetrated with softer/loose soils above the bearing strata. The Helical Pulldown® micropile (HPM) series is also used in applications similar to those requiring the use of the type SS/RS combinations.

Please refer to the CHANCE Technical Design Manual, 4th Edition for:

- Complete list of mechanical rating and section properties of the central steel shafts
- Product feasibility
- Installation methodology for guidelines on the proper shaft section based on application, soil conditions, site accessibility, etc.

Segments or sections are joined with bolted couplings. Installation depth is limited only by soil density and practicality based on economics. A helical bearing plate or helix is one pitch of a screw thread. All helices, regardless of their diameter, have a standard 3" pitch. Being a true helical shape, the helices do not auger into the soil but rather screw into it with minimal soil disturbance. Helical plates are spaced at distances far enough apart that they function independently as individual bearing elements; consequently, the capacity of a particular helix on a helical pile shaft is not influenced by the helix above or below it.

## Lead Section and Extensions

The first section or lead section contains the helical plates. This lead section can consist of a single helix or up to four helices. Additional helices can be added, if required, with the use of a helical extension. Standard helix sizes are shown in Table 1. The helices are arranged on the shaft such that their diameters increase as they get farther from the pilot point. The practical limits on the number of helices per pile is four to five if placed in a cohesive soil and six if placed in a cohesionless or granular soil.

Plain extensions are then added in standard lengths of 3.5, 5, 7, and 10 feet until the lead section penetrates into the bearing strata. Standard helix configurations are provided in the product series tables in this section. Note that lead time will be significantly reduced if a standard helix configuration is selected.

STANDARD HELIX SIZES TABLE 1	
LEAD SECTION AND EXTENSIONS	
DIAMETER in (cm)	AREA in² (cm²)
6 (15)	27 (172)
8 (20)	48 (312)
10 (25)	76 (493)
12 (30)	111 (716)
14 (35)	151 (974)
16 (40)	199 (1,286)

## ROCK-IT™ Lead Sections

The CHANCE® ROCK-IT™ lead section is an innovative solution to penetrate rocky or high blow count soils without pre-drilling or field modifications. The single carbide, patent pending design was developed to provide an economical, yet proven solution to reach load-bearing depths in high blow count material.

Some features of the ROCK-IT are:

- Reduced installation time to save time and money
- Wear resistant, offset carbide tip designed to break through rocky soil
- Reduced spiking of torque and chatter during installation for a safer alternative

\* The 1-3/4" adapters have a clevis connection, not a forged coupling.

Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.

## 1-1/4" to 2-1/4" Square Shaft Notes

1. Included connection hardware:
  - SS125 1-1/4" material: 5/8" diameter bolt per ASTM A325 type 1 and nut.
  - SS5 and SS150 1-1/2" material: 3/4" diameter bolt per ASTM A325 type 1 and nut or ASTM A193 Grade B7 with cold weather properties and nut.
  - SS175 1-3/4" material: 7/8" diameter bolt per ASTM A193 Grade B7 and nut.
  - SS200 2" material: 1-1/8" diameter bolt per ASTM A193 Grade B7 and nut.
  - SS225 2-1/4" material: 1-1/4" diameter bolt per ASTM A193 Grade B7 and nut.
2. Catalog numbers with an \* after the number are lead sections that have been designed with a longer shaft above the top helix for the CHANCE® Helical Pulldown® micropile.
3. The letter "T" after the helix diameter stands for 1/2" thick helix material (otherwise common thickness is 3/8").
4. All helices are spaced three times the diameter of the preceding helix unless otherwise specified by the customer.
5. The standard helix has a sharpened leading edge.
6. All products are hot dip galvanized per ASTM A153.
7. For plain steel and/or special order items contact your area CHANCE distributor for availability.

*Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.*

# SS/RS COMBINATION HELICAL PILES

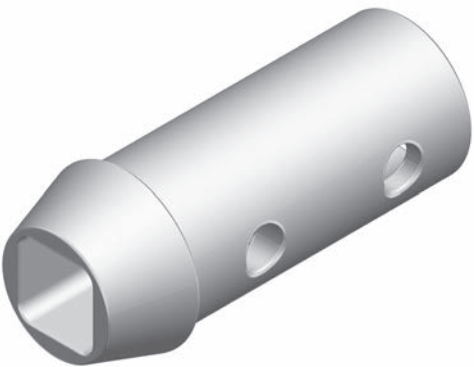

## Helical Transition Coupler

### Adapts Type SS to Type RS Pile Shafts

The type SS/RS combination piles are used mainly in compression applications in areas where soft/loose soils are located above the bearing strata (hard/dense soils) for the helices. The type RS material with a much greater section modulus will resist columnar buckling in the soft/loose soil. The type SS material allows for adequate penetration of the helices into the hard/dense material without “spin-out”, i.e., loss of thrust of the helices in the soft/loose material.

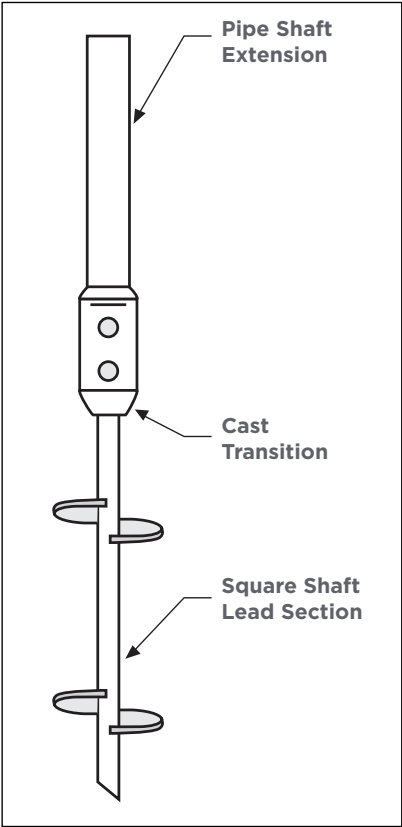

The transition section adapts type SS helical lead sections to type RS plain extensions. Installation of this combination pile is the same as a standard helical pile. Table 37 provides the various standard transition couplers that are available along with their ratings. Special transition couplers, such as RS2875 to RS4500, are also available. Please contact your CHANCE® distributor for availability and delivery times.

A Registered Professional Engineer with suitable soil information should prepare the design.

## HELICAL PULLDOWN® Micropile

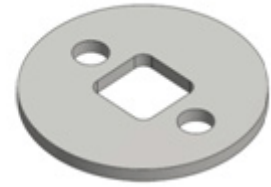

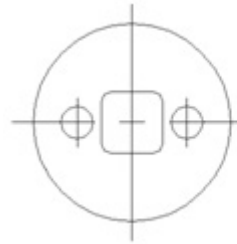

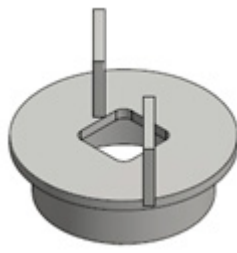

The CHANCE® Helical Pulldown® micropile (HPM) is a method used to form a grout column around the shaft of a standard helical pile. The installation process can employ grout only (see Figure 1) or grout in combination with either steel or PVC casing (see Figure 2).

To begin the process, a helical pile is placed into the soil by applying torque to the shaft. The helical shape of the bearing plates creates a significant downward force that keeps the foundation advancing into the soil. After the lead section with the helical plates penetrates the soil, a lead displacement plate and extension plates are placed onto the shaft. Resuming torque on the assembly advances the helical plates and pulls the displacement plate downward, forcing soil outward to create a cylindrical void around the shaft. From a reservoir at the surface, a flowable grout immediately fills this void surrounding the shaft. Additional extensions and displacement plates are added until the helical bearing plates reach the minimum depth required or competent load-bearing soil. This displacement pile system does not require removing spoils from the site.

*Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.*

## REMEDIAL REPAIR BRACKETS

### C1500121 Standard Bracket and T-Pipe System

- Used with CHANCE® type SS5 & SS150, type RS2875.203, and type RS2875.276
- Use for lifts up to 4" (10 cm)
- System includes:
  - Foundation bracket
  - T-pipe
  - Hardware
- Order separately: two 5/8" (16 mm) diameter anchor bolts per pile as required.
- Standard finish is hot dip galvanized per ASTM A153.
- Ultimate mechanical strength of bracket body is 80,000 lbs (356 kN).
- Working mechanical strength of bracket body is 40,000 lbs (178 kN).

#### C1500121 STANDARD BRACKET AND T-PIPE RATINGS

TABLE 46

Catalog No.	Ultimate Mechanical Strength <sup>1,3</sup> lbs (kN)	Pile Size in (mm)	Product Series	Max Working Capacity <sup>2,3</sup> per Product Series lbs (kN)	Features
C1500486	40,000 (178)	1-1/2 (38) Square	SS5/SS150	20,000 (89)	Lowest cost with square shaft
C1500487	80,000 (356)	1-1/2 (38) Square	SS5/SS150	20,000 (89) 25,000 (111)	Higher capacity with SS150
C2780001	40,000 (178)	2-7/8 (73) Round	RS2875.203	20,000 (89)	Lowest cost with round shaft
C2780002	80,000 (356)	2-7/8 (73) Round	RS2875.203	25,000 (111)	Higher capacity with stronger T-pipe
C2780011	80,000 (356)	2-7/8 (73) Round	RS2875.276	30,000 (133)	Higher capacity with RS2875.276
C2780012	40,000 (178)	2-7/8 (73) Round	RS2875.276	20,000 (89)	Higher capacity with RS2875.203

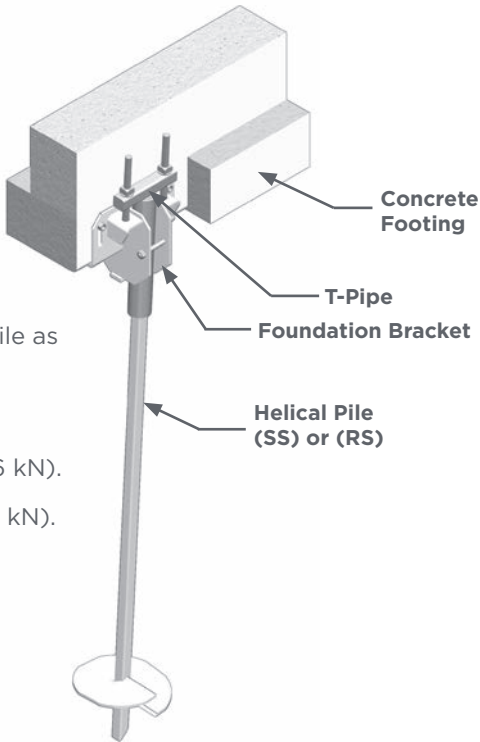

**Notes:**

1. Ultimate mechanical strength is for the bracket body and T-pipe combination.
2. The capacity of CHANCE helical pile systems is a function of many individual elements, including the capacity of the foundation, bracket, pile shaft, helix plate and bearing stratum, as well as the strength of the foundation-to-bracket connection, and the quality of the helical pile installation. The fifth column shows typical working capacities of the CHANCE helical pile system based upon maximum shaft exposure of 2 feet and soil strength having a minimum Standard Penetration Test (SPT) blow count "N" of 4. Actual capacities could be higher or lower depending on the above factors.
3. The ultimate capacity of the system, i.e., bracket, T-pipe, and pile shaft, can be increased to the pile shaft compression capacity limit as shown in the Technical Design Manual, provided the pile shaft is reinforced using a pipe sleeve or grout column. The maximum working capacity shall not be greater than one-half of the ultimate mechanical strength of the bracket and T-pipe combination given above.

Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.

C1500299 Standard Bracket and T-Pipe System

- Used with CHANCE® type SS175
- Use for lifts up to 4" (10 cm)
- System includes:
  - Foundation bracket
  - T-pipe
  - Hardware
- Order separately: two 5/8" (16 mm) diameter anchor bolts per pile as required.
- Standard finish is hot dip galvanized per ASTM A153.
- Ultimate mechanical strength of bracket body is 80,000 lbs (356 kN).
- Working mechanical strength of bracket body is 40,000 lbs (178 kN).

C1500299 STANDARD BRACKET AND T-PIPE RATINGS  
TABLE 47

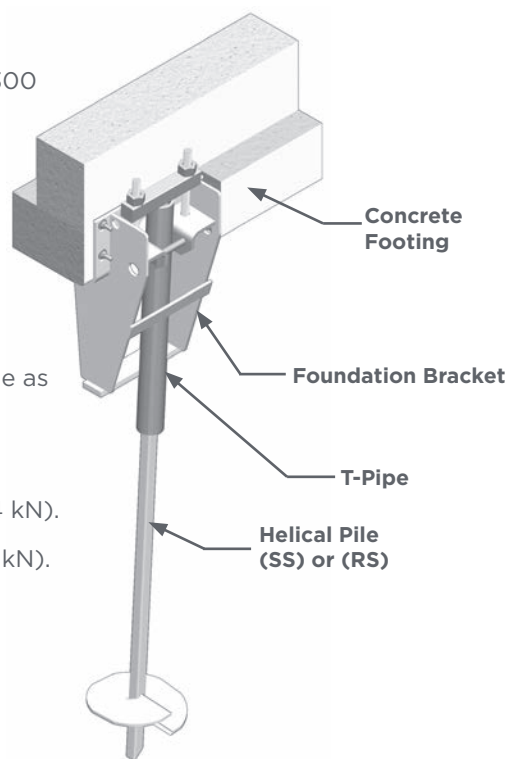

Catalog No.	Ultimate Mechanical Strength <sup>1,3</sup> lbs (kN)	Pile Size in (mm)	Product Series	Max Working Capacity <sup>2,3</sup> per Product Series lbs (kN)	Features
C1500488	80,000 (356)	1-3/4 (38) Square	SS175	30,000 (133)	Lowest cost with Type SS175 product series

- Notes:
1. Ultimate mechanical strength is for the bracket body and T-pipe combination.
  2. The capacity of CHANCE helical pile systems is a function of many individual elements, including the capacity of the foundation, bracket, pile shaft, helix plate and bearing stratum, as well as the strength of the foundation-to-bracket connection, and the quality of the helical pile installation. The fifth column shows typical working capacities of the CHANCE helical pile system based upon maximum shaft exposure of 2 feet and soil strength having a minimum Standard Penetration Test (SPT) blow count "N" of 4. Actual capacities could be higher or lower depending on the above factors.
  3. The ultimate capacity of the system, i.e., bracket, T-pipe, and pile shaft, can be increased to the pile shaft compression capacity limit as shown in the Technical Design Manual, provided the pile shaft is reinforced using a pipe sleeve or grout column. The maximum working capacity shall not be greater than one-half of the ultimate mechanical strength of the bracket and T-pipe combination given above.

Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.

## C1500147 Standard Bracket and T-Pipe System

- Used with CHANCE® type SS175, type SS200, and type RS3500.300
- Use for lifts up to 4" (10 cm)
- System includes:
  - Foundation bracket
  - T-pipe
  - Hardware
- Order separately: four 5/8" (16 mm) diameter anchor bolts per pile as required.
- Standard finish is hot dip galvanized per ASTM A153.
- Ultimate mechanical strength of bracket body is 120,000 lbs (534 kN).
- Working mechanical strength of bracket body is 60,000 lbs (267 kN).

**C1500147 STANDARD BRACKET AND T-PIPE RATINGS**  
**TABLE 48**

Catalog No.	Ultimate Mechanical Strength <sup>1,3</sup> lbs (kN)	Pile Size in (mm)	Product Series	Max Working Capacity <sup>2,3</sup> per Product Series lbs (kN)	Features
C1500474	120,000 (534)	1-3/4 (44) Square	SS175	40,000 (178)	Lowest cost with square shaft
C1500475	120,000 (534)	3-1/2 (89) Round	RS3500.300	50,000 (222)	Higher capacity with RS3500.300
C1500508	120,000 (534)	2 (51) Square	SS200	50,000 (222)	Highest capacity with square shaft

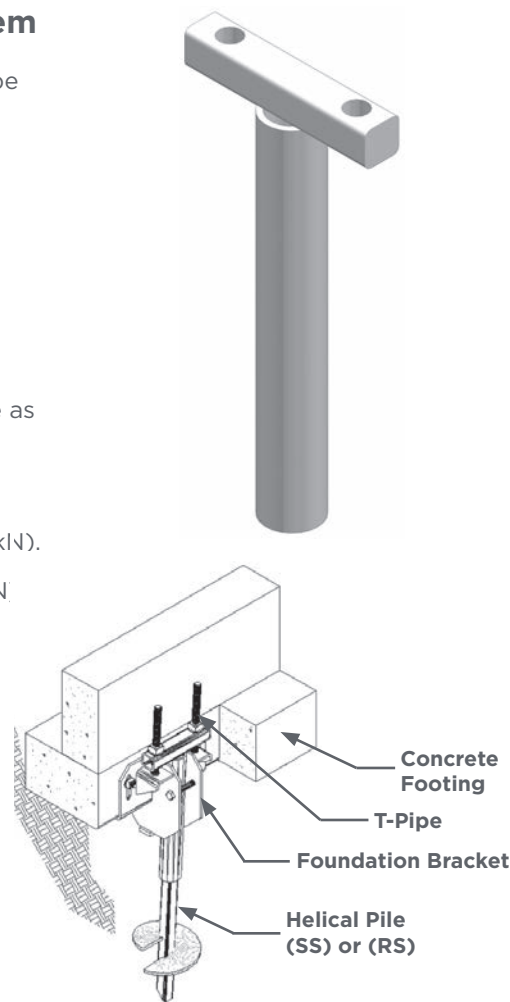

**Notes:**

1. Ultimate mechanical strength is for the bracket body and T-pipe combination.
2. The capacity of CHANCE helical pile systems is a function of many individual elements, including the capacity of the foundation, bracket, pile shaft, helix plate and bearing stratum, as well as the strength of the foundation-to-bracket connection, and the quality of the helical pile installation. The fifth column shows typical working capacities of the CHANCE helical pile system based upon maximum shaft exposure of 2 feet and soil strength having a minimum Standard Penetration Test (SPT) blow count "N" of 4. Actual capacities could be higher or lower depending on the above factors.
3. The ultimate capacity of the system, i.e., bracket, T-pipe, and pile shaft, can be increased to the pile shaft compression capacity limit as shown in the Technical Design Manual, provided the pile shaft is reinforced using a pipe sleeve or grout column. The maximum working capacity shall not be greater than one-half of the ultimate mechanical strength of the bracket and T-pipe combination given above.

Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.

PSAC1500499 Low Profile Bracket and T-Pipe System

- Used with CHANCE® type SS5 & SS150, type RS2875.203, and type RS2875.276
- Use for lifts up to 4" (10 cm)
- System includes:
  - Foundation bracket
  - T-pipe
  - Hardware
- Order separately: two 1/2" (13 mm) diameter anchor bolts per pile as required.
- Standard finish is hot dip galvanized per ASTM A153.
- Ultimate mechanical strength of bracket body is 30,000 lbs (133 kN).
- Working mechanical strength of bracket body is 15,000 lbs (67 kN)

## Direct Jack (DJ) Underpinning Bracket

- Used with CHANCE® type SS5 & SS150, SS175, RS2875.276, and RS3500.300
- Use for lifts up to 4" (10 cm)
- System includes:
  - Foundation bracket
  - T-pipe
  - Two thread bar nuts
  - Order separately: two 1/2" (13mm) diameter concrete anchor bolts per pile as required.
  - Standard finish is hot dipped galvanized per ASTM A153.
  - Material specifications:
    - Bracket Body: 1/2" thick steel per ASTM A36 latest rev. T-pipe.
    - Pipe: steel pipe per ASTM A500 latest rev.
    - Lifting studs: Williams form #11 Grade 90.

Actual capacities could be higher or lower depending on the above factors.
3. The ultimate capacity of the system, i.e., bracket, T-pipe, and pile shaft, can be increased to the pile shaft compression capacity limit as shown in the Technical Design Manual, provided the pile shaft is reinforced using a pipe sleeve or grout column. The maximum working capacity shall not be greater than one-half of the ultimate mechanical strength of the bracket and T-pipe combination given above.

Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.

## C1500239 Light Duty / Porch Bracket

This bracket is used to raise the concrete slab edge or non-load bearing wall using a screw lift system. The assembly consists of the light duty porch bracket and helical pile (order helical pile separately).

- Ultimate mechanical strength = 10,000 lbs (44 kN)
- Maximum working capacity = 5,000 lbs (22 kN)
- Standard finish is hot dip galvanized per ASTM153.
- Use only with SS5 and SS150 piles

## T1500085 / C1501441 Concrete Slab Brackets

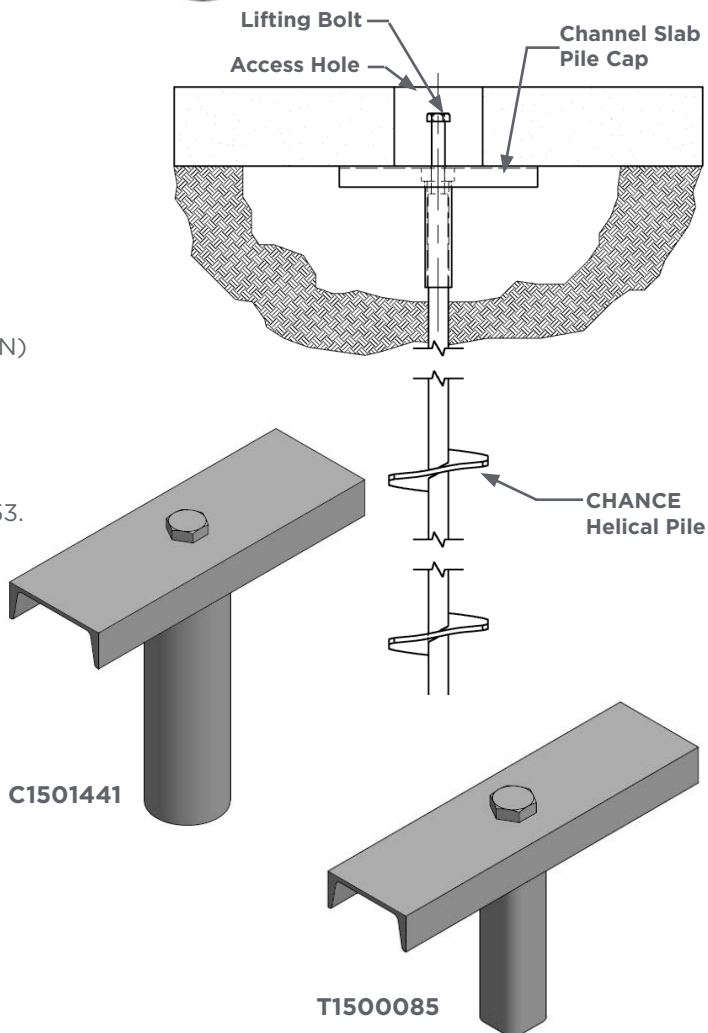

This bracket is used to raise the concrete slab using a screw lift system through the slab. The assembly consists of the screw lift slab bracket and helical pile (order helical pile separately).

- Ultimate mechanical strength = 10,000 lbs (44 kN)
- Maximum working capacity = 5,000 lbs (22 kN)
- Maximum lifting capacity = 7,500 lbs (33 kN)
- Standard finish is hot dip galvanized per ASTM153.

### STANDARD PILE SIZE(S):

- **T1500085** to be used with only SS5 and SS150 piles
- **C1501441** to be used with only RS2875 piles

NOTE: Standard access hole: 6"-8" dia. for SS piles.

Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.

## C1501339 Interior Slab Bracket (ISB)

When used in conjunction with the patented CHANCE® combo pile, the ISB can result in overall lower project costs and still achieve load requirements.

- Ultimate mechanical strength = 57,000 lbs (254 kN)
- Maximum working capacity = 28,000 lbs (125 kN)
- Maximum lifting capacity = 28,000 lbs (125 kN)

### STANDARD PILE SIZE(S):

- **C1501339** to be used with RS2875.203 and RS2875.276 piles
- Standard finish is hot dip galvanized per ASTM153

## Walkway Support Brackets

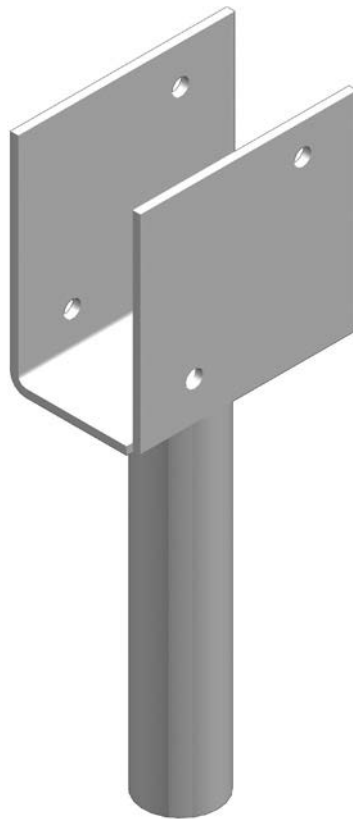

These brackets are used to connect timbers or girder beams to helical piles. The split bracket design is more universal because beam thickness or tolerance is not a problem. Both of these brackets fit over an SS5 or SS150 square shaft and inside an RS2875.203 round shaft.

### Types of Walkway Brackets:

- **C1100682** and **C1100736** brackets are used only with SS5 and SS150 piles.
- **C1100936** and **C1100925** brackets are used only with RS2875 piles.

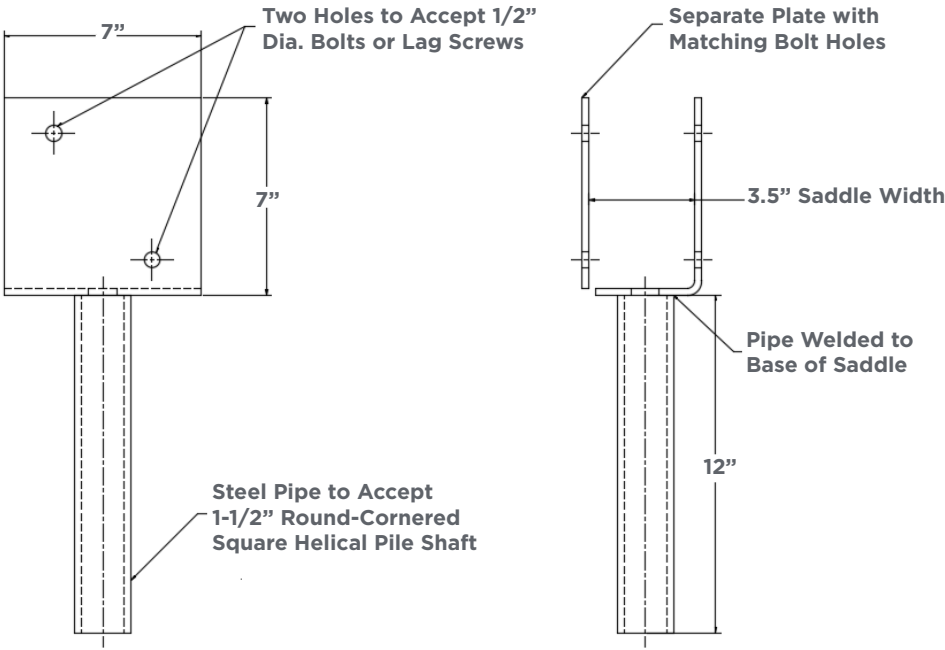

Standard finish is hot dipped galvanized per ASTM A153.

For different size shafts, mounting holes, or special finishes please contact your CHANCE distributor for availability.

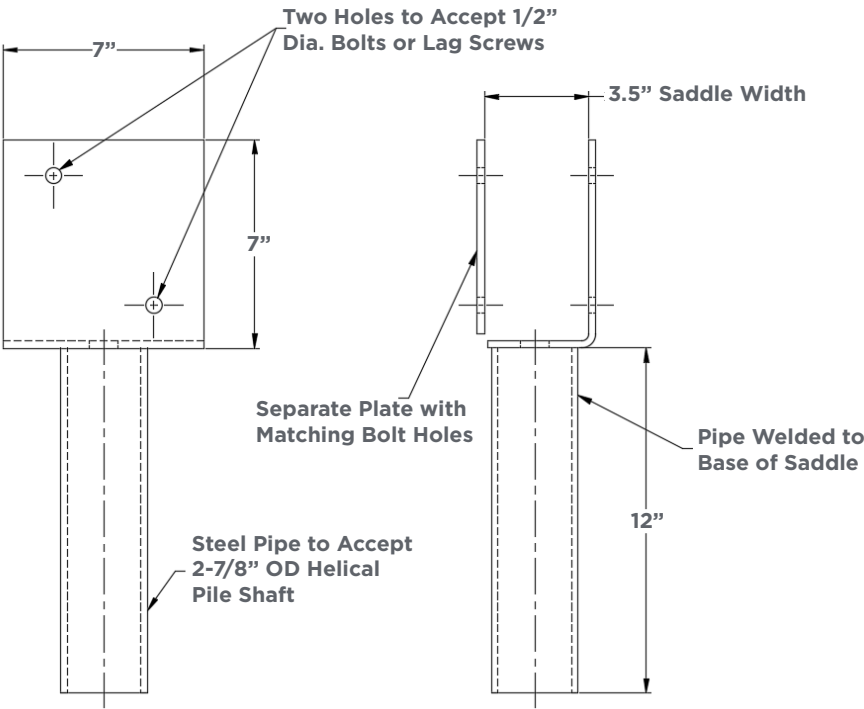

*Because Hubbell has a policy of continuous product improvement, we reserve the right to change design and specifications without notice.*

# TERMINATION DEVICES

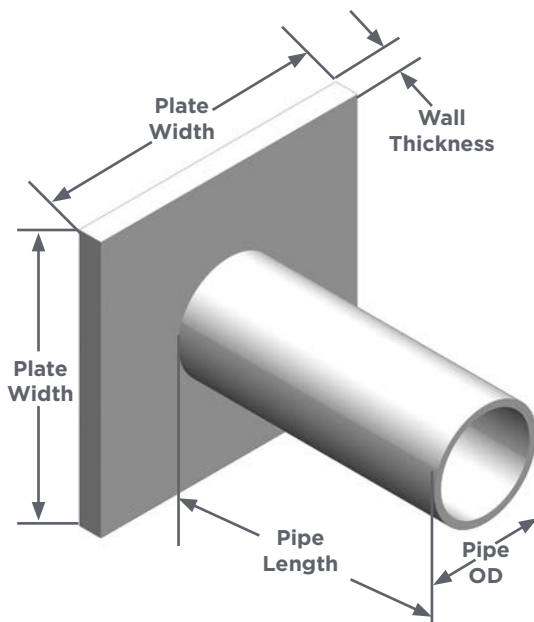

Specifying exactly what you need is simple with CHANCE® helical foundation support products. A variety of standard accessories and special termination devices are offered depending on the project and application. This section illustrates some of our standard termination devices along with their mechanical ratings. If your project requires a special termination device, please contact your CHANCE distributor.

## New Construction Pile Caps

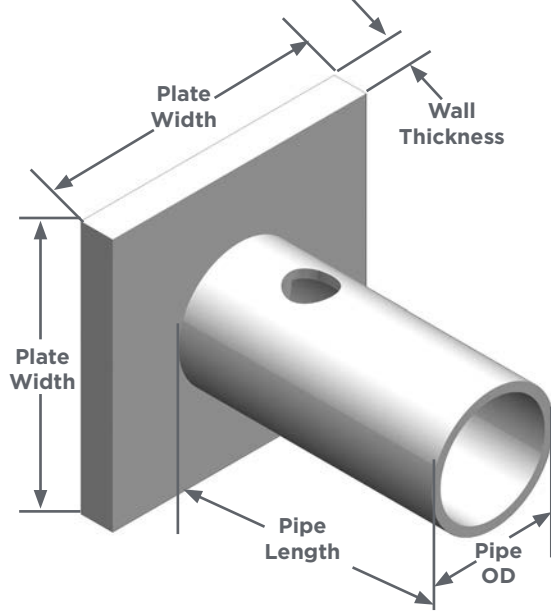

The CHANCE new construction pile caps are designed for use with CHANCE type square shaft (SS) and round shaft (RS) helical piles and for embedment in cast-in-place concrete foundations. For preliminary design, guidelines for reinforced pile caps refer to Section 4 of the Technical Design Manual, 3rd Edition.
